(54) CDMA CODE DOMAIN DISPLAY METHOD

(57) Abstract:

PROBLEM TO BE SOLVED: To obtain a CDMA(code division multiple access) code domain display method that requires no image switching and where part of an image is not hidden.

SOLUTION: Power is measured in units of each channel and each symbol (S1), values between the maximum value, and the minimum value are divided by number of display colors, normalized (S2), the displayed image is divided into panel matrices based on each channel and each symbol, a normalized color corresponding to the symbol power is arranged to each panel (S3), and the normalized value (color value) is decided between adjacent panels by linear approximation, and the color is decided and arranged (S4).
